## MaxMiddle

A new way of seeing: MaxMiddle offers clarity from every angle by expanding lateral peripheral vision. The extraordinary width of the intermediate zone, which offers clear and comfortable vision for reading and short to medium distances, makes MaxMiddle a lens like no other.

MaxMiddle is designed to minimize distortions and aberrations, ensuring a superior visual experience in all situations. The progressive correction of presbyopia is seamlessly integrated, allowing a smooth transition between different vision zones.

This progressive design represents the latest advancement in optimizing peripheral, intermediate, and central vision, offering unparalleled visual clarity and optimal comfort for those seeking superior performance.

At a distance of 80/90 cm, the field of vision extends up to 40 cm, allowing you to view devices (such as the cash register screen) without having to turn your head.
